

Trevor Zucker

Software Engineer

Omaha, NE | (562) 528-6063 | zucker.trevorj@gmail.com | github.com/trevorzucker

Professional Summary

Software Engineer with 9 years of hands-on programming, software development, and engineering experience, including over 3 years in dedicated software engineering roles. Skilled in designing, developing, and deploying full-stack applications and microservices using Java, C#, Python, TypeScript, Docker, and Kubernetes. Experienced with CI/CD pipelines (Jenkins, Ansible), Agile/Scrum methodologies, and infrastructure as code. Background spans defense, telecommunications, and freelance software projects. Passionate about writing clean, scalable, maintainable code and mentoring teams on best practices.

Skills

Languages: Java, C#, Python, TypeScript, JavaScript, SQL, C, C++, PHP, Lua, HTML, CSS

Frameworks & Tools: Spring Boot, React, Node.js, Docker, Kubernetes, Jenkins, Ansible, Git, Azure, MySQL, Linux, Eclipse, Visual Studio, VS Code, NuGet

DevOps & Practices: CI/CD, Agile, Scrum, REST APIs, microservices, automated testing, infrastructure as code (IaC)

Hardware & Embedded: Raspberry Pi, Arduino, oscilloscopes, 3D printing (CAD & fabrication)

Work Experience

Software Engineer, Northrop Grumman

December 2022 – Current | Nebraska, USA

- Led agile scrum software team to execute and exceed customer demands
- Mentored new engineers, coaching them on standard code practice and code baseline familiarity
- Led development of microservices-based architecture using Java and TypeScript, leveraging Docker and Kubernetes for deployment
- Led feature development as Product Owner by translating complex customer requirements into actionable development tasks. Coordinated with stakeholders to gather feedback, iteratively improving features to exceed customer expectations
- Developed CI/CD pipelines with Jenkins and Ansible, automating build, test, and deployment processes across multiple environments

Systems Technologist, Motorola Solutions

January 2022 – December 2022 | Nebraska, USA

- Performed and executed Motorola P25 Trunking system assembly, installation, documentation, and test reports
- Streamlined repetitive tasks with automation programs written in C#
- Managed and balanced several projects to meet deadlines

USAF Radio Frequency Transmissions Systems Technician

January 2018 – January 2022 | Holloman AFB, NM; Ramstein AB, Germany

- Installed, maintained, and troubleshooted advanced radio systems, specializing in SATCOM and LOS technologies
- Designed and reworked STOPLIGHT project with bash scripts to automate legacy processes, cutting a 2-hour process down to minutes
- Spearheaded the mainstream use of 3D printers at USAF by developing cheap and reliable replacement equipment with CAD and 3D printing, reducing repair costs by up to 60%
- Conducted several high-stress military operations requiring innovation and communications skills

Freelance Developer

March 2016 – Current

- Planned, wrote, and tested modifications to various video games in C#, Java, and Lua
- Developed class structures with modularity in mind to create a simple framework for future expansion
- Created comprehensive documentation and references in source code for future reference and easy debugging

Intern for L3Networks

March 2016 – July 2016

- Developed skills with Microsoft Azure to compile and analyze data sets

Projects

Programmer for Restitched, February 2020 - May 2020

- Contributed to the development of Restitched with C# and Unity in an Agile environment

USAF 3D Printing & CAD Course for Expeditionary Units, September 2020 - December 2020

- Created and led a course explaining the impact 3D Printing has on the DOD, how to use, build, and troubleshoot 3D printers, as well as the basics on CAD software

SFFPC Embedded Display, February 2021

- Runs off of a Raspberry Pi Zero connected to the MB's USB header, enabling control via SSH
- Wrote a custom interface in React with a C# backend to display various information on-screen

Minecraft Themed CMS, May 2019 - June 2019

- Implemented MVC architecture with PHP, utilizing MySQL as the database for efficient data management
- CMS has a built-in shop to buy/sell/trade items through the website, as well as a web-chat to communicate to players in-game or run client side commands
- User Management system uses Mojang API to authenticate logins

Raspberry Pi Portable, May 2014

- Desoldered non-essential Raspberry Pi components, created a battery charging circuit, hand-wired all circuits, and created the case in CAD
- Ran a custom interface created in C# and WinForms which ran on Linux with Mono
